QUESTION & ANSWERS

QUESTION: 1

You've been asked to create a new domain; which of the following statements is true? Choose the correct answer:

- Option A : Domains can only be created in the dashboard
- Option B : Domains can only be created on the command line
- Option C : Domains can be created using both the command line and dashboard
- Option D : All of the above

Correct Answer: B

Explanation/Reference:

At this time, domains can only be managed on the command line.

QUESTION: 2

You have been asked to expire an object named file in a container on Sept. 30, 2017. How would you find the unix_time for the day?

Answer :

Explanation/Reference:

date '2017/09/30' +%s is the correct command and usage.

QUESTION: 3

If you were asked to retrieve the server password that was randomly set during the creation of a stack, what are the possible commands you would use to find that information? Choose the correct answer:

- Option A : openstack stack password show and openstack stack show
- Option B : openstack stack output show and openstack stack list
- Option C : openstack stack password list and openstack stack list
- Option D : openstack stack output show and openstack stack show

Correct Answer: D

Explanation/Reference:

Outputs can be retrieved with the stack output show command or may be visible with stack show

QUESTION: 4

You need to look at a specific service in the endpoint list as part of troubleshooting an issue. Which of the following methods can you use to narrow down the output on your screen? Choose the correct answer:

Option A : openstack endpoint list | grep service

Option B : openstack endpoint list --name service

Option C : openstack endpoint list --service service

Option D : A and C

Correct Answer: D

Explanation/Reference:

--service is the way to do this via the CLI command itself, but using a grep is always an option to narrow information on the command line.
